**MORE THAN PAIN RELIEF...
SUPERIOR PAIN CONTROL™**

MORE THAN TRADITIONAL PAIN RELIEF

One of the major priorities of your surgical team will be managing your post-operative pain. Traditionally, oral narcotics have been the standard of care for treating the pain of patients who are sent home on the day of their surgery. Unfortunately, oral narcotics have often left patients with periods of uncontrolled pain and numerous side-effects that contribute to a less than comfortable recovery period.

Today, patients sent home after surgery have an alternative that provides superior pain control. Advances in pain management techniques and medical technologies allow non-narcotic pain medications to be delivered to the area of your surgery or to surrounding nerves, blocking the pain at its source. This allows you to obtain superior post-operative pain control from the comfort of your own home.

- ▶ Superior Pain Control
- ▶ Minimize narcotic use and associated side effects
- ▶ Resume normal activities faster
- ▶ Additional pain control at your fingertips
- ▶ Every pump comes standard with the service of a 24-hour toll-free technical support hotline

ambIT® PROVIDES SUPERIOR PAIN CONTROL

The ambIT® Pain Control System from Summit Medical Products consists of a compact, portable infusion pump that delivers numbing medication to control your pain. The catheter and pump are set up during surgery so that when you wake up, your pain is already being controlled.

MINIMIZE NARCOTIC USE & SIDE-EFFECTS

By delivering local non-narcotic pain medications to control your pain, the ambIT® Pump minimizes the need for oral narcotics and the potential for their associated side-effects, such as:

- ▶ Nausea/Vomiting
- ▶ Constipation
- ▶ Drowsiness
- ▶ Clouded thoughts
- ▶ Potential for addiction

RESUME NORMAL ACTIVITIES FASTER WITH ambIT®

Pain control, with minimal or no side effects from narcotics, will enable you to return to your normal daily activities sooner. The ambIT® Pain Control System was designed to help you do so with the following features:

- ▶ Compact, lightweight design
- ▶ Easy push-button operation
- ▶ Convenient belt pack to discreetly carry your pump

PAIN CONTROL AT YOUR FINGERTIPS

The handheld ambIT® Pump not only delivers a continuous flow of medication to control your baseline pain level, it also gives you the ability to control any sudden spikes in pain with the simple push of a button. The bolus button located on the front of the pump puts pain control at your fingertips.

“I can’t believe how great it was to have an ambIT® Pump for pain relief after my surgery. I was able to recover at home, sleeping in my own bed, and eating my own food. If it started to hurt, all I had to do was push the button on my ambIT® Pump and I was pain free.”
